

Activity checklist: jobs for you

Before we can install pre-built fibre, there are a number of things you need to have in place:

Install 20mm lead-in green pipe from the property boundary to where you want the external termination point (ETP) installed on the outside of your premise. For more information, visit www.chorus.co.nz/lead-in-guide

Complete the internal wiring to the home distributor box to access power. Any power plugs and cables need to be positioned so that the door to the box can close

The best place to keep your modem is in your main living area near your TV. If the modem is being placed inside the home distributor box, the box must be plastic (not metal) to allow the modem to transmit

If we've supplied you with material other than the 20mm lead-in green pipe, please provide us with your 'as built' plans. For more information, visit www.chorus.co.nz/as-builts-checklist

Your properties have power available so we can test the new fibre connections

Addresses for your new properties have been confirmed by your local council

Properties are clearly addressed on site so our technicians can make sure they are connecting the right house

BUILD ORDER INSTALL ENJOY

Pre-built fibre

For your new property development

When you develop with Chorus, we can pre-install fibre in every premise.

Pre-built fibre: the benefits

- Market and sell your development as 'fibre ready'
- A better experience for your new occupants – no technician visits needed as fibre is already installed. All they'll need to do is order a fibre plan from their broadband provider and plug in their modem
- We currently offer our pre-built fibre service for free with every new property development contract with Chorus
- If you have SMART homes within your new development, pre-built fibre means you can test connected devices are working

Getting your development connected to pre-built fibre:

1. Place order

When your development is nearing the final stages of construction, like gibbing and painting, please complete our pre-built fibre order form, available at www.chorus.co.nz/pre-built-fibre, and email it back to us at pre-built_fibre@chorus.co.nz. We'll process your order within 10 working days. See our handy checklist in this brochure for what you need to have completed before we can carry out the pre-built fibre installation work.

Once we've processed your order for pre-built fibre, we'll contact you to set up an appointment for one of our technicians to come and install fibre at each premise. You or your onsite contact need to be present for this appointment.

2. Installation

At the installation appointment, our technician will bring the fibre from the property boundary and connect it to a small box called an ETP, or external termination point, which will be installed on the outside of each premise in your development. The fibre will then be taken from the ETP and connected to another small box called the ONT, or optical network terminal, inside the home distributor box of each premise – this is what your new occupants' modem will plug into.

For more information, visit www.chorus.co.nz/pre-built-fibre
